

# Portfolio Website

Jared Webb

## Abstract

---

I hope to create an online portfolio in the form of a website that displays work I have done for technical and professional communication class as well as programming projects from other classes. I hope to complete this project by April 28th, 2023. This project will be used to promote myself professionally to future employers. The website will be well designed and provide a good user experience

## Statement of Qualifications

---

I am pretty qualified to create one of these. First of all, I understand who I am and what I've done. Also, I have technical and professional writing skills as a result of AP Language and composition in high school as well as the experience that I have making documentation for websites when I did when I was a software developer doing web development for internal web pages for Quantum Signal A.I., a wholly owned subsidiary of Ford Motor Company. Also, I have web development experience from that as well as a project I did during the semester for Spartahack 8, a hackathon hosted by students of Michigan State. I have taken Database management where the final project was to put together a course feedback database hooked up to a website. I have also taken courses with ReactJS which is a Javascript framework. I am fairly comfortable with this project. I can accomplish this.

## Project Description

---

### Introduction

---

The project is a website to be hosted on the internet for anyone to access. I will host my resume and example cover letter. I will show my understanding of the field with a report and I will train others in my field with an instructional plan, video, and activity.

### Project Statement and Scope

---

The mission of the project is to improve my employability and hopefully improve my image with those companies and employers that see the website. I hope to properly show my work in technical and professional communication by showing them all the work that I have done and will do for this class. I would also like to have potential employers see projects I have worked on. Some of those projects include the rubber duckie artificial intelligence chatbot. I would also like to display the compiler that I made for a subset of Pascal called Pascal Junior. I would like to display the remote desktop application I created for systems programming. I would also like to show off some personal projects I am developing

like a deep learning neural network that can play basic card games like euchre as well as a meal planning efficiency app. This will be a website with multiple pages

## Project Goal(s)

---

I hope to gain a broader understanding of web development. I hope to put a clean and professional images out to the world. I hope this project can show that I have gone above and beyond other applicants for jobs I am applying to.

## Project Objectives

---

- Show all assignments I have completed for technical and professional communication
- Create clean website with good user interface
- Build my online professional image

## Project Audience

---

The audience for this project will be my instructor for HU3120 technical and professional communication. Also, I hope recruiters and business professionals can see this as well.

## Project Deliverables and Timeline

---

### Project Plan (Stages) and Timeline

I hope to complete this project by April 28th, 2023.

### Project Deliverables

What are your deliverables? (a cover letter, resume, report, and instructional unit)

- Cover Letter and Resume (Due Date: February 26)
- Report (Due Date: March 26)
- Instructional Unit (Due Date: April 9)
- Peer Review: (Due Date: April 13)
- Complete Project Site (Due Date: April 20)

### Evaluation and Feedback Cycle

I will review all feed back I received from anyone and will update the project accordingly.
